RE: Site Inspection, DOE/049/002- Varasite Claims, DOE/049/012-
POK-A-Hole #1-6.

On May 10, 1988 I inspected the area of the above referenced D.O.E.'s in Manning Canyon. They are located near the old Manning Tailing's area which is a mile east of Mercur. No post 1975 surface disturbances or claim markers could be found. The D.O.E.'s were filed in 1978 and 1982 respectively. It is recommended that both files be retired and the applicants notified of this action when the new rules are implemented.
